

17th October 2025

First Appearance at “the 2nd Startup Business and New Technology Fair”

On October 8 and 9, 2025, we exhibited a booth featuring Sensimed S.A.’s Triggerfish and our advanced open-source platform for smart contact lens manufacturing at **The 2nd Startup Business and New Technology Fair**, organized by Toyota Motor Corporation, MUFG Bank, Ltd., and the Chubu Bureau of Economy, Trade and Industry. The exhibition was held at Toyota Motor Corporation’s headquarters in Toyota City, Aichi Prefecture.

This was a closed exhibition for Toyota Group-related parties and marked the first exhibition appearance of our platform.

We participated as [Sensimed S.A.](#), a subsidiary of our company that developed the intraocular pressure fluctuation monitoring system [Triggerfish](#). At our booth, we showcased [Triggerfish](#) and presented an overview of our platform through a panel display. In addition, we exhibited a Triggerfish contact lens-type sensor, as well as a smart contact lens prototype incorporating an LED, developed using our platform technology.

Over the two-day exhibition, we engaged in direct discussions with 110 visitors at our booth, making this exhibition a valuable opportunity to gain insights and explore possibilities for future collaborations and developments.

We will continue to advance our technology and strive to create new value through innovation.

Sensimed S.A. Booth at the Exhibition
